

tattoo CARE

instructions 

+++++

Please follow these steps for **your tattoo after-care**, as this is a **crucial part** of the healing process:

1. Remove the Tattoo Film after 3 days.
2. Wash the tattoo immediately using only your bare hand and a neutral soap under lukewarm water to remove the rest of the ink, blood and serum. Dry the tattoo gently with paper towel, never any fabrics.
3. You can start applying a thin layer of Bepanthen or a similar tattoo ointment - as long as it does not contain any perfumes or alcohol.
4. Keep applying thin layers 2-3 times a day with clean hands for the next 2 weeks.

For the next 2 weeks don't go swimming, take a bath, go to the sauna nor tanning/direct sun light.

Your tattoo will form a scab, which you should never pick nor scratch. It's important to let it fully heal.

If you have more questions/concerns, feel free to contact me via my Email as written here
